- **Team Leader:** Shivam Mishra - Btech CSE AI&ML - 2nd - Galgotias University

- 1. Landing Page.
- 2. React User Website.
- 3. Delivery Man App
- 4. Store App

# WELCOME TO KARTIKMART

- KartiKMart is a **multivendor delivery platform** that simplifies the ordering and delivery process for food, groceries, pharmacy products, e-commerce items, and parcels.
- The system connects **customers, stores, and delivery men** through a unified platform.  
--Let's embark on this journey together!

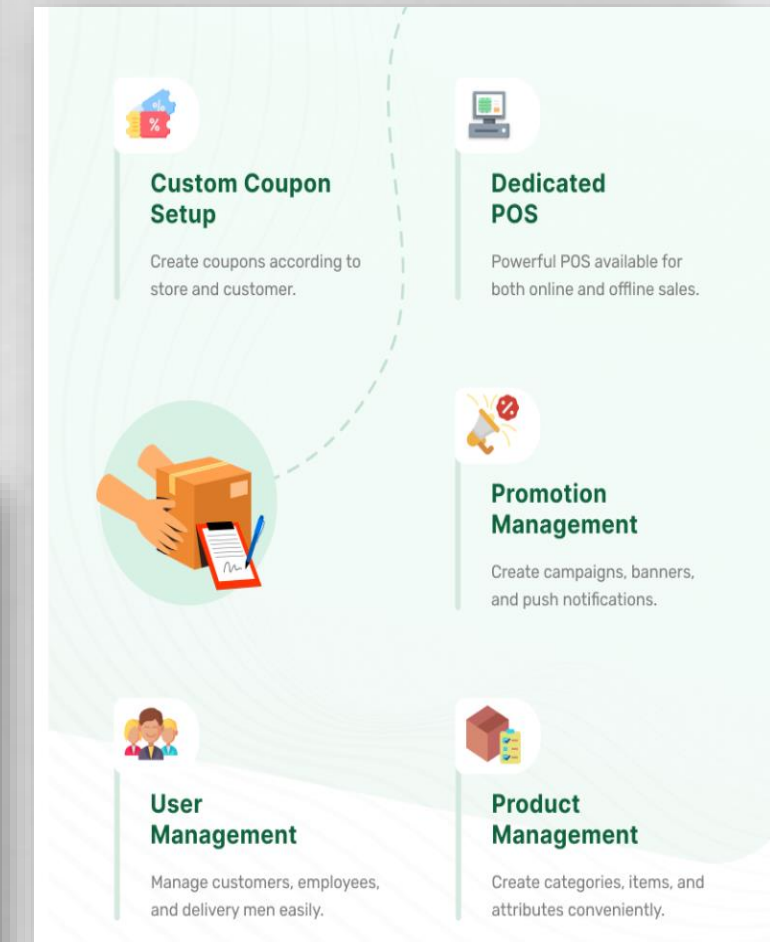

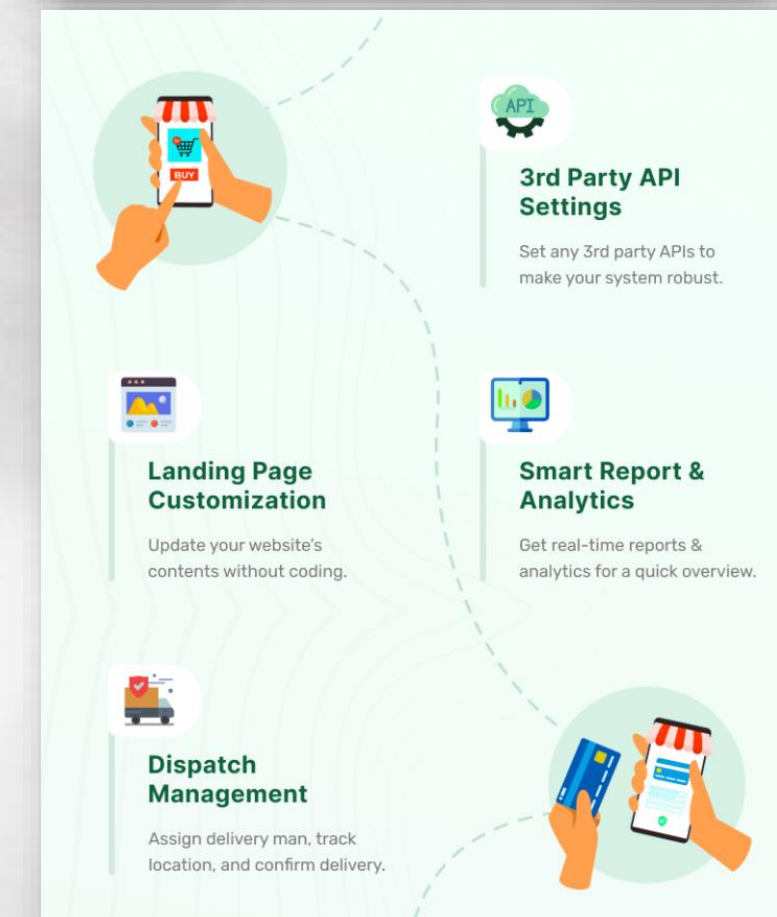

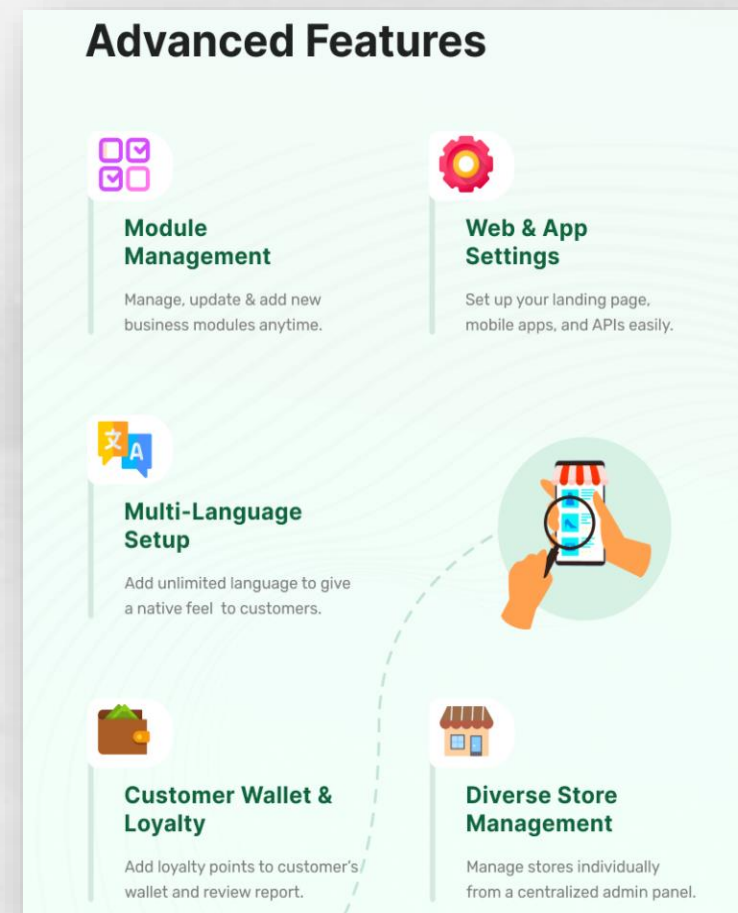

# WEBSITE AND ADMIN PANEL

## Order Flow (Happy Path)

1. **Customer Places an Order:**
  - The customer can only order from a **single store at a time**.
  - Once the order is placed, it's sent to the **delivery man** for acceptance.
2. **Delivery Boy's Role:**
  - The delivery boy can **accept** or **reject** the order based on availability.
  - If the **Delivery Confirmation Model** is turned on, the delivery boy's confirmation is required before the order proceeds.
3. **Store's Role:**
  - Once the **delivery confirmation** is received, the store receives the order on their dashboard and begins processing the order (cooking/preparing).
  - If the order is **digitally paid**, the order directly goes into the **confirmed status**, bypassing the need for delivery boy confirmation.
4. **Order Pickup and Delivery:**
  - The **delivery boy** picks up the order after store confirmation and delivers it to the customer.
  - For **self-pickup orders**, the store manages the entire order without involving a delivery boy.
5. **Scheduled Orders:**
  - Operations for scheduled orders begin **15 minutes** before the scheduled delivery time.

# WEBSITE AND ADMIN PANEL

## Core Features & Functionalities

### 1. Multi-Language Support

- Admin and store panels support multiple languages, both **LTR (Left-to-Right)** and **RTL (Right-to-Left)**, ensuring a **localized experience** for users.

### 1. Coverage Area Management

- **Admin Panel** allows businesses to **define zones** on a map for delivery.
- Only customers within the **coverage area** can place orders, ensuring **targeted service**.

### 1. Module Management

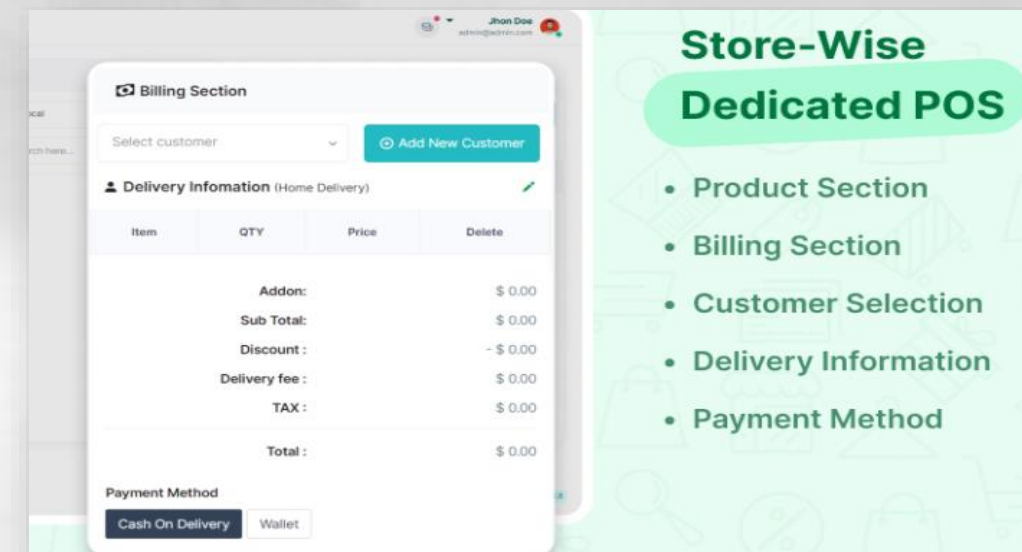

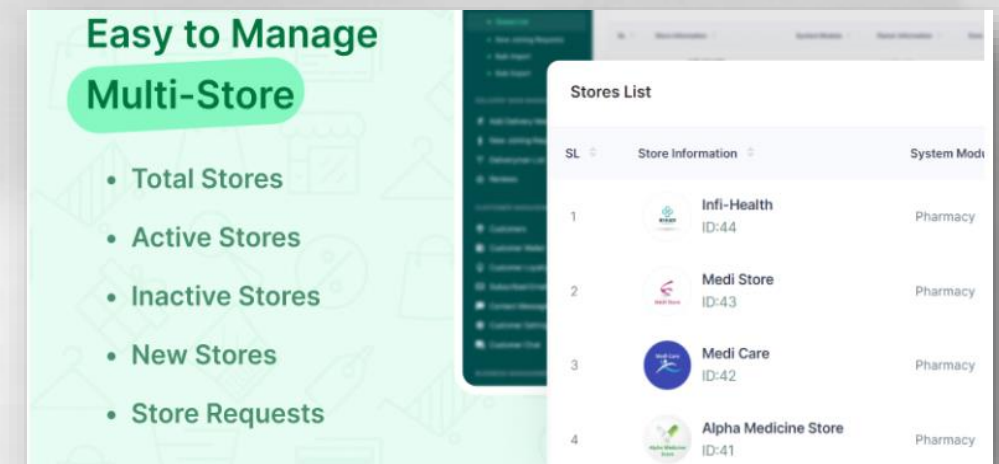

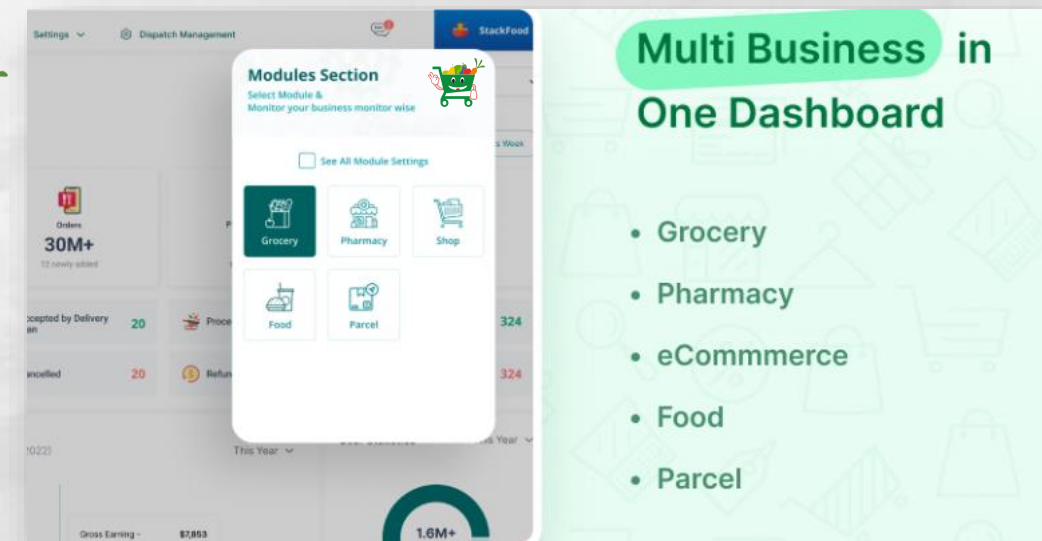

- Businesses can create, customize, or deactivate any system **module** (Food, Grocery, Pharmacy, etc.).
- **Modules can be managed easily** from the Admin Panel, with options to add new modules with custom names, icons, and thumbnails.

### 1. Store Management

- Add **unlimited stores** under different modules.
- Manage all stores seamlessly from the **Admin Dashboard**.

### 1. OTP Integration

- **SMS gateways** for OTP verification during user registration or order placement, ensuring secure transactions.

# WEBSITE AND ADMIN PANEL

## Order and Dispatch Management

### 1. Advanced Product & Order Management

#### • Product Management:

- Add new products to stores, with attributes like price, units, and discounts.
- Use meta tags for SEO to boost visibility.

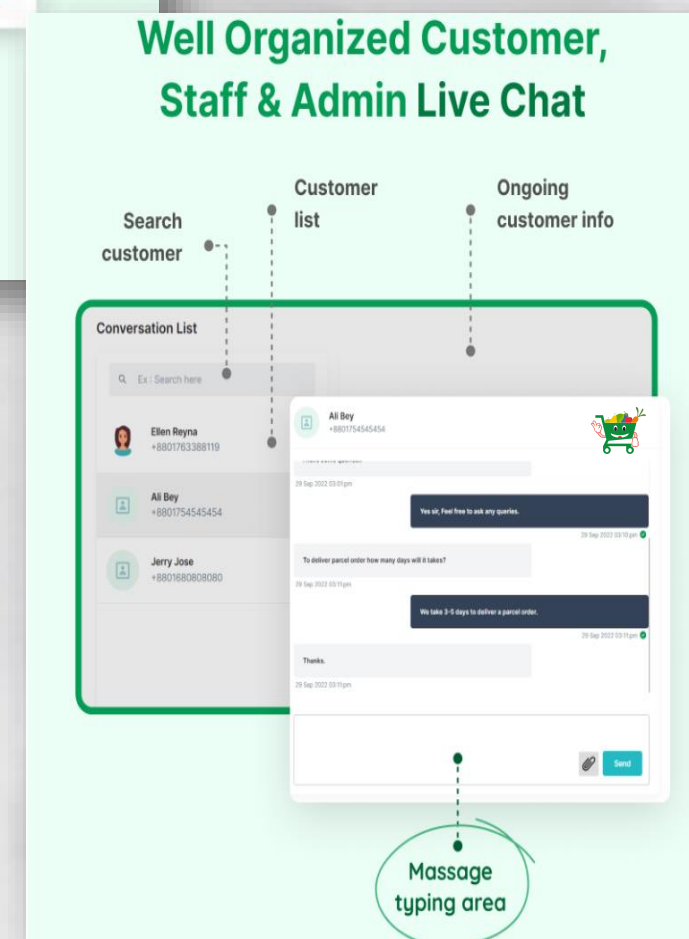

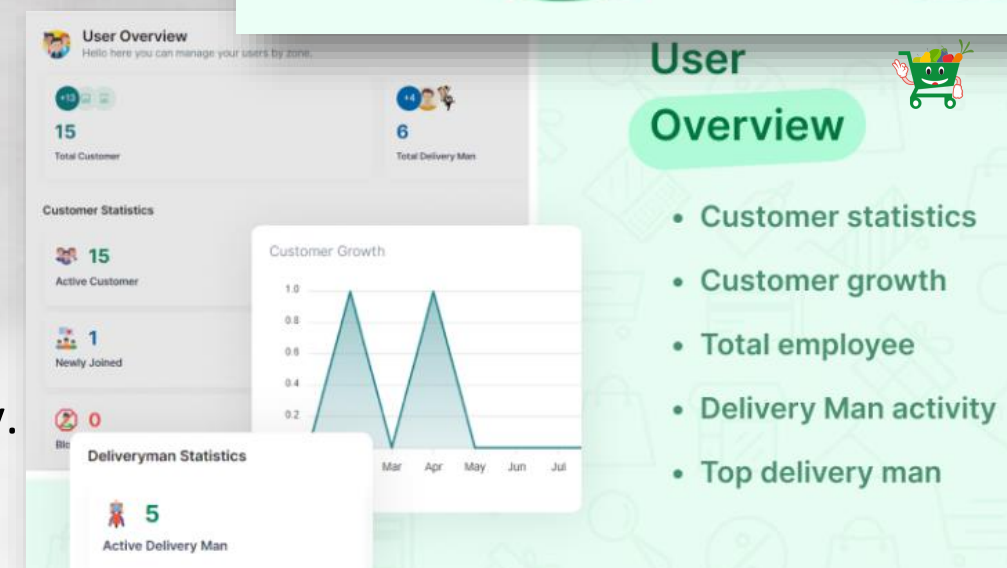

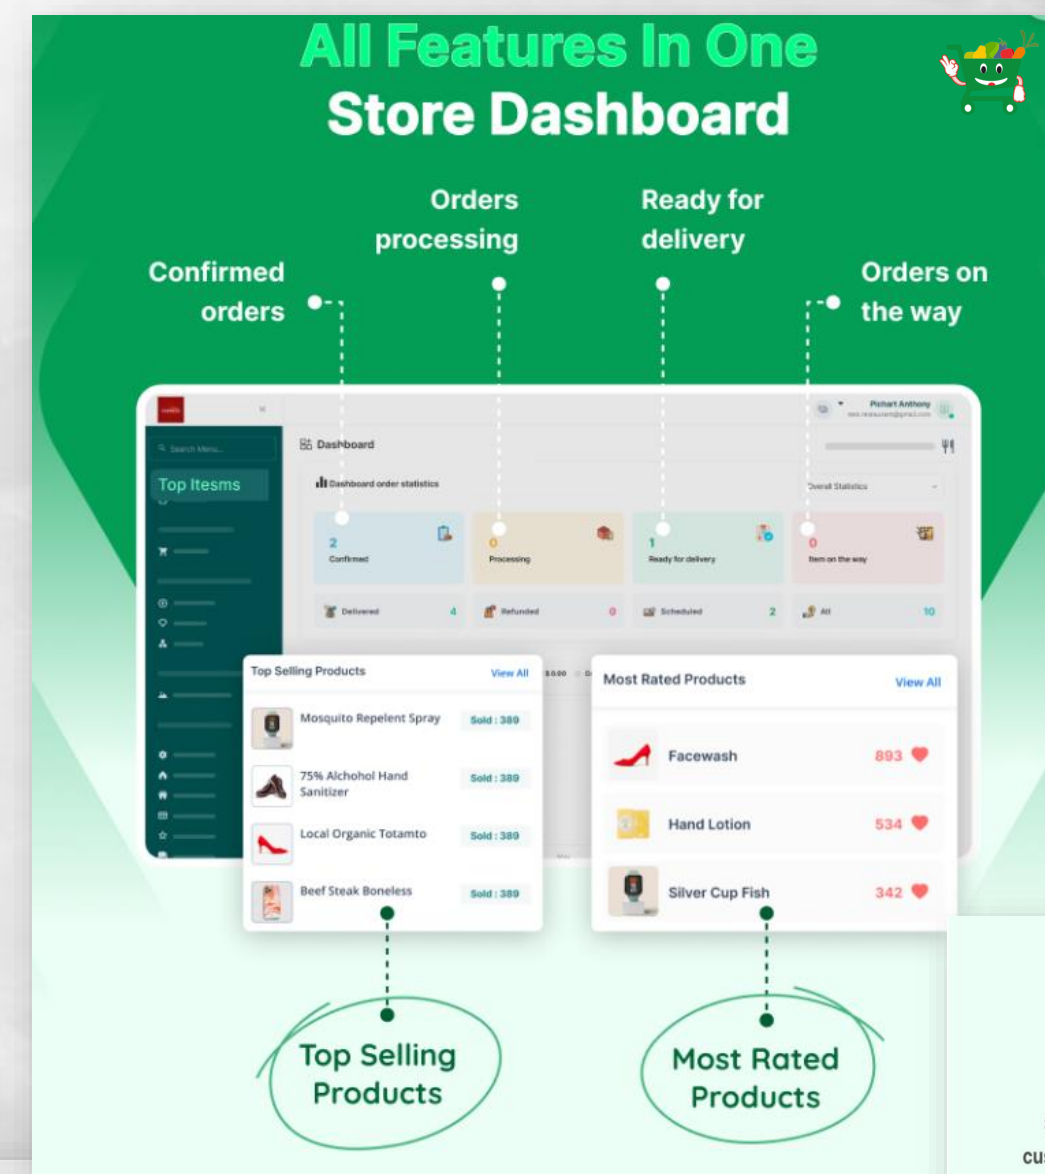

#### • Advanced Order Management:

- Track orders through **status updates**: Pending, Processed, Confirmed, etc.
- Manage **order history** for **admin** and **stores**.

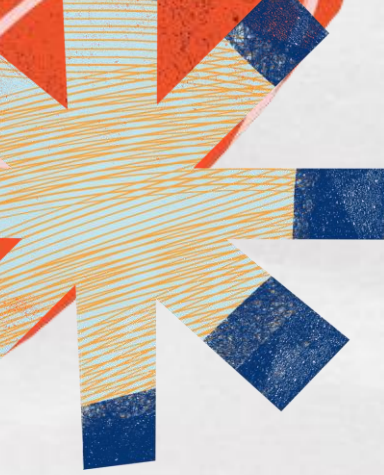

### 1. Dispatch & Delivery Management

#### • Smart Dispatch Management:

- **Real-time tracking** of active and inactive delivery men.
- **Assign orders manually** to delivery boys if no one accepts the order automatically.
- Track delivery status on the **Admin Dashboard** with **Google Maps** integration.

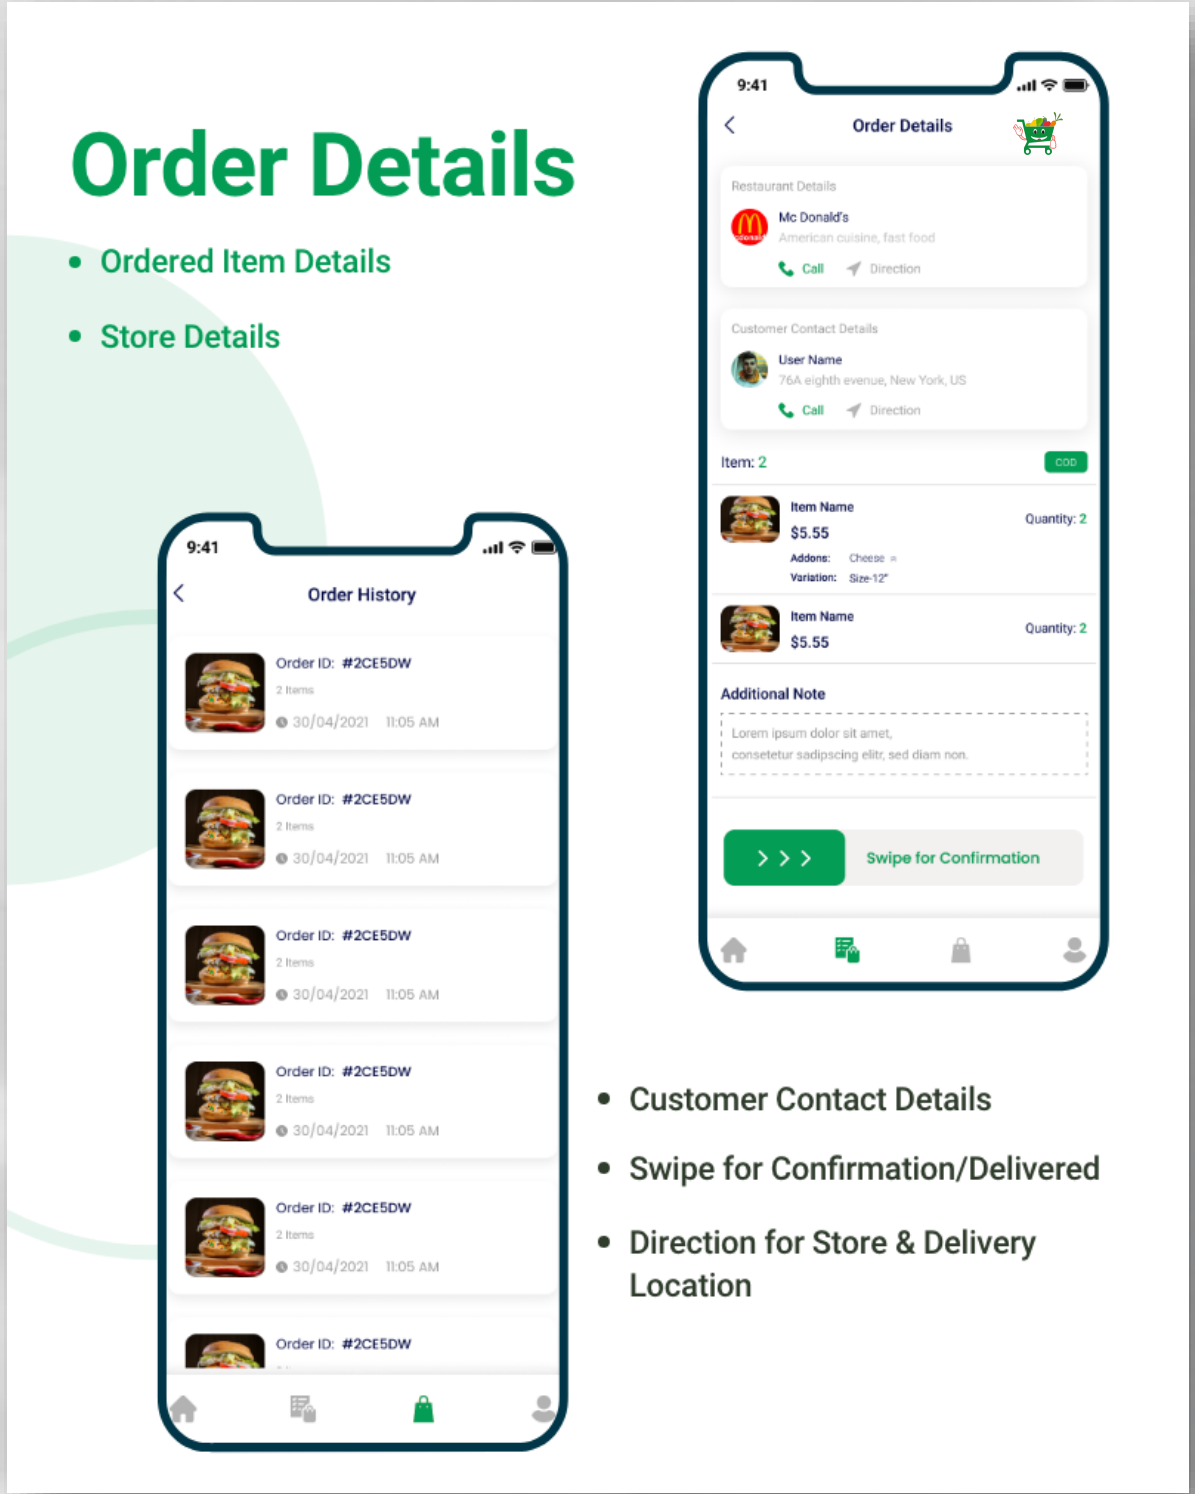

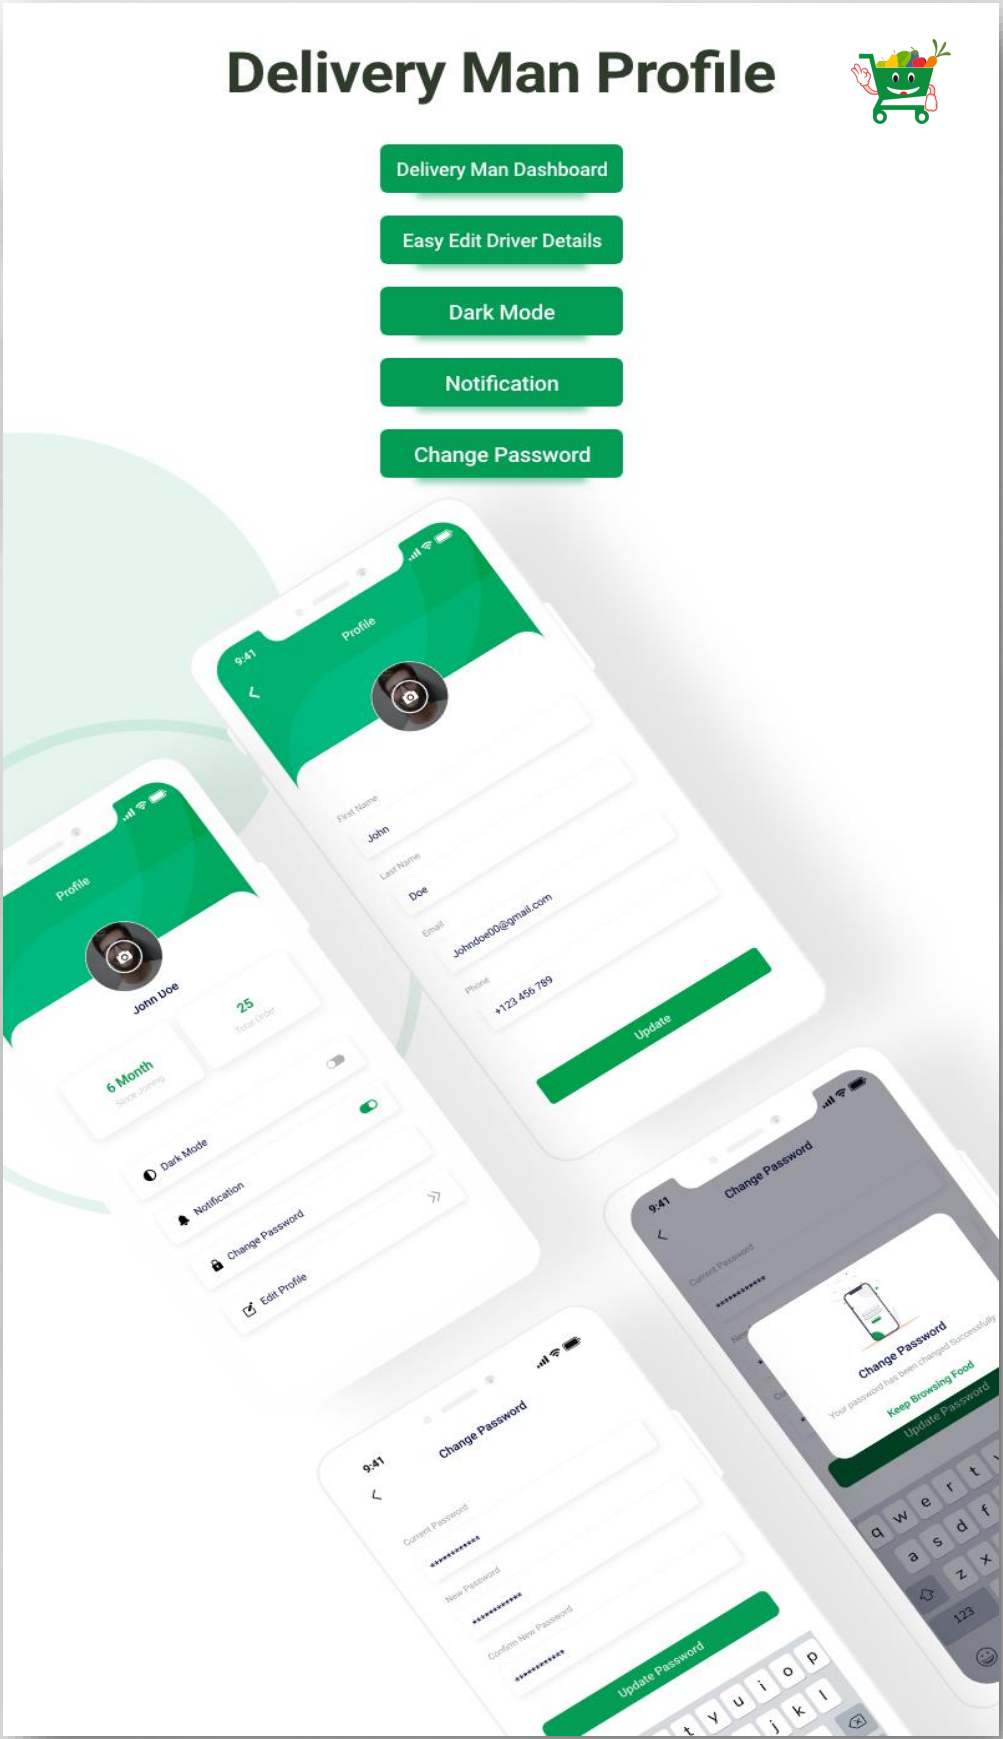

1. Delivery Man App

- Create unlimited delivery man accounts through the admin panel.
- The app includes options for **freelancers or salaried employees**.
- Delivery men can track **pickup and delivery locations** and update **order status** (e.g., "picked up," "delivered").

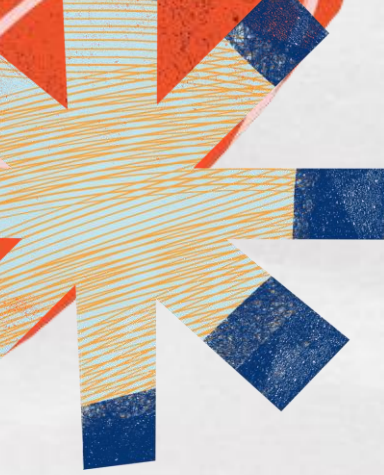

1. Manual Delivery Assignment

- The admin can manually **assign a delivery man** to an unassigned order to ensure **timely delivery**.

- Customer Contact Details
- Swipe for Confirmation/Delivered
- Direction for Store & Delivery Location
